| | The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply | | | | | |
| A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). | | | | | | |

DETAILED ACTION

Claim Rejections - 35 USC § 102

 The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

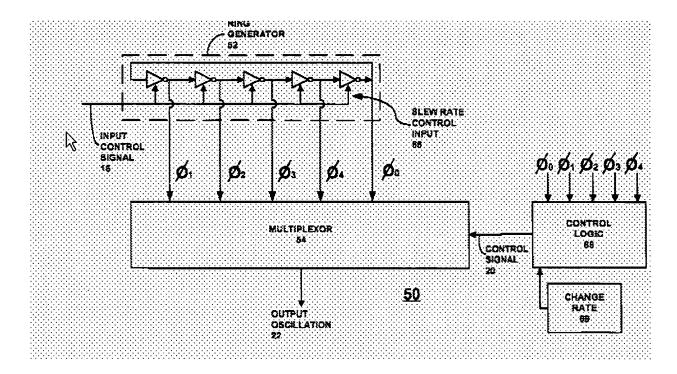

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1,2,4,9,10,11,12,13,14,15,16,17,18,19 are rejected under 35 U.S.C. 102(b) as being anticipated by Glen et al (US 6,194,971).

The reference by Glen et al. discloses a Phase shifting oscillator that allows for pulse position modulation, see figures 2 and 3, figure 2 shown below, has a ring oscillator(62) with delay arrangement that receives a regular sequence of pulses (feedback) and delay stages delaying each pulse accordingly. Each delay stage providing a corresponding pulse with a different phase. The selection component (MUX,54) receives the regular sequences of pulses with different phases (00-05), modulating signal comp(20) is shown developed according to the (00-05) input to control logic (68). As shown in figure 3, a corresponding Pposition is shown for each phase signal (00 and 02) for example; note in col. 5, lines 10-16 PWM is discussed. The synchronization input, see figure 5, shows a PLL implementation with synch input (116). The change rate (69) or control input (to vco, fig.5) allowing for the frequency adaptation for the modulated signal (PPM or PWM). The method steps being inherent.

Application/Control Number: 10/663,350

Art Unit: 2817

Allowable Subject Matter

 Claims 3,5-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The examiner could not find fair suggestion for the shift register arrangement or pulse generator in addition to all else claimed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arnold M. Kinkead whose telephone number is 571-272-1763. The examiner can normally be reached on Mon-Fri, 8:30 am -5 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Pascal can be reached on 571-272-1769. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
